

Mobile Estimating

If you ever collect dimensions in the field to take back to the office and create a bid, Timberline® Office Mobile Estimating offers you a better alternative.

Do you spend a lot of time at the job site answering “what-if” questions like “What if we knock out the far wall over there?” Or, “What if we add another bay in here?” Mobile Estimating offers a practical way to bring your estimating technology to the field.

Designed for Palm OS® handheld personal digital assistant (PDA) devices, Mobile Estimating equips you with all the tools you need to perform detailed takeoffs, anywhere, in the palm of your hand. Then, upon return to the office, you can transfer the data electronically from your handheld device to Timberline Office’s desktop software and instantly generate a detailed estimate or change order.

Bid one time and get it right

With Mobile Estimating, you’ve got a much better chance of collecting all the necessary dimensional information you need to create a bid the first time. That’s because the software lets you take a subset of the database you use at your desktop to the field—giving you access to cover page information, item numbers and descriptions, assembly numbers and descriptions, WBS codes, variables, and variable help. So you can use your Timberline Office estimating

database as a checklist for takeoff, just like thousands of estimators do in their offices every day.

Mobile Estimating lets you access existing estimate information or create brand new estimates right on the spot. So you’re sure to log all of a project’s information in one place, keeping you better organized and ready to make estimate additions as needed.

Product features

- Lets you take off key project information on a handheld PDA device.
- Runs on 3Com® Palm Powered™ (Palm OS) handhelds.
- Gives you the capability to transfer data to Timberline Office’s desktop software to generate full, detailed bids and change orders.
- Allows you to store a subset of your Timberline Office estimating database on the handheld device to ensure collection of all the dimensional information needed to create an estimate.
- Displays estimate cover page information, item numbers and descriptions, assembly numbers and descriptions, WBS codes, variables, and variable help.
- Lets you attach notes to an item, assembly, or estimate.

Mobile Estimating is a part of Timberline Office, fully integrated software created to streamline work and connect the people you depend on to build your business.

Storing a subset of your database, Mobile Estimating ensures you collect all of the necessary information in the field to create a bid when you return to the office.
